- **Features:**

    o   Free daily backups

    o   Built-in caching

    o   Easy cPanel alternatives

2. Krystal Hosting (UK-based) - https://krystal.io/

- **Why:** Eco-friendly UK company with data centers in London, solid uptime.

- **Features:**

    o   cPanel access

    o   Free website migration

    o   UK-based support

◆ **How to Download Website Files from Eclipse FTP**

If your website is hosted with Eclipse and need to back up your files via FTP, here's exactly how to do it.

● **FTP Access Details**

- **FTP Hostname:** myfiles.eclipse.co.uk

- **Port:** 21

- **Protocol:** FTP (plain or with explicit TLS if supported)

- **Username/Password:** (Use your Eclipse FTP credentials)

● **What You'll Need**

- A **desktop FTP client**:

  - [FileZilla (Free)](#)

  - WinSCP (Windows only)

  - Cyberduck (Mac)

● **Step-by-Step: Download Website via FileZilla**

Step 1: Install FileZilla

- Download and install FileZilla Client from: https://filezilla-project.org/download.php

Step 2: Open FileZilla and Connect

1. Open FileZilla.

2. In the top bar, enter:

   - **Host:** myfiles.eclipse.co.uk

   - **Username:** your FTP username

   - **Password:** your FTP password

   - **Port:** 21

3. Click **Quickconnect**.

   *If you're prompted about an insecure connection, you can continue or configure TLS under **Site Manager**.

Step 3: Locate Website Files

- Once connected:

  - The **right pane** shows files on the server.

  - The **left pane** shows files on your local computer.

- Navigate to the directory where your website is stored (often /public_html/ or /htdocs/).

Step 4: Download Files

1. In the **right pane**, select all website files and folders.

2. Right-click and choose **Download**.

3. Files will be transferred to the local folder selected in the left pane.

🟡 **Tip:** Make sure to download:

- HTML, CSS, JS, PHP files

- Media (images, videos)

- .htaccess, robots.txt (if present)
